World Vision Website Redesign

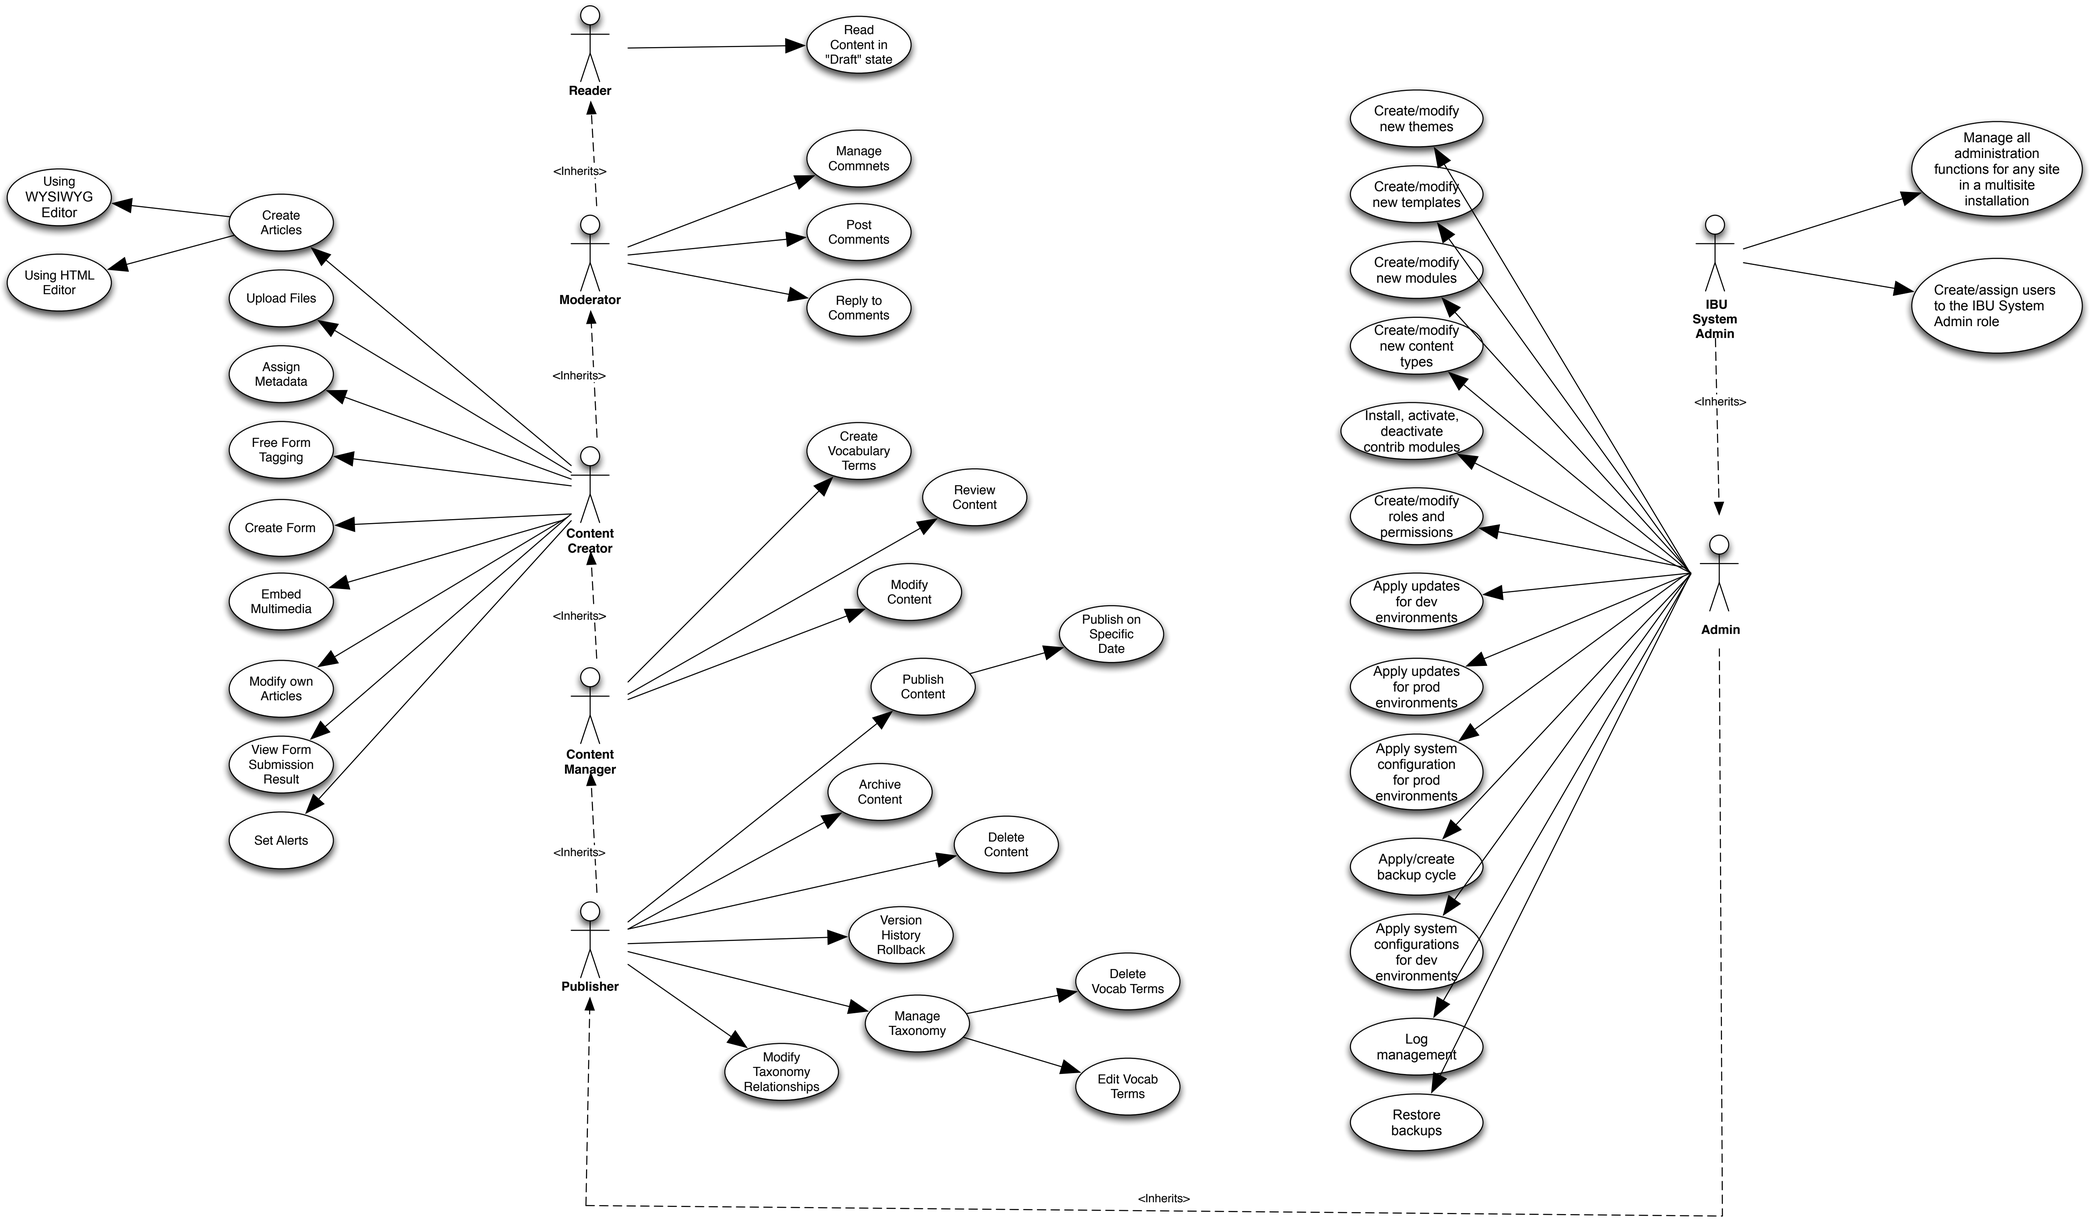
Use-Case Diagram



World Vision Website Redesign

"Get Involved" Wireframe

Notes

1. Logo, linking back to homepage, consistent on every page.
2. Social media icons linking to WVUS social media accounts/pages.
3. Page title and subtitle.
4. Rotating features. A feature can be either an image or an animated/interactive element (using JavaScript). Max 6 features.
5. Different than the page title, this is the page tagline and description. Text can be longer than the title.
6. Secondary nab for all the "Get Involved" pages.
7. These elements are displayed using a Drupal View. Each element is a "page node", and we're bringing in its title, thumbnail, and blurb, and linking to the page itself.
8. If there are more than 4 rows we will start to paginate.
9. This button links to …?

9.1 This button links to …?
